Experience

TechnipFMC

Sr. Installations Engineer

Houston, TX

July 2023 – Present

- Direct planning and execution of offshore well intervention and installation operations, supporting production assurance and well integrity for high-pressure subsea systems.
- Resolve real-time well access, pressure control, and equipment issues to minimize production impact and improve intervention efficiency during offshore operations.
- Conduct technical reviews, risk assessments, and process hazard analyses (PHA) for new projects, repairs, and incident investigations.
- Representing engineering function as the primary interface for operators, ensuring compliance with API 6A, API 17D, and applicable regulatory standards.
- Implement Management of Change (MOC) initiatives, reducing landing string project lead time by 50% while maintaining safety and regulatory compliance.
- Collaborate with global engineering and operations teams to improve intervention tooling performance and operational reliability.
- Leading toolbox talks and safety reviews, exercising Stop Work Authority to maintain operational integrity.

Recent Projects

- Deepwater Intervention Vessel Campaign June 2026
 - Multiple well Jumper/Flowline installations, electrical and hydraulic tie-ins, well commissioning.
- Third-Party System Integration Test Facility February 2026
 - Incident investigation, function verification testing, ROCS integration testing.
- Deepwater Drillship Campaign January 2026
 - XT recovery, Hanger recovery, Tubing Head Spool hydrate remediation and recovery.
- Multi-Service Intervention Vessel Campaign October 2025
 - Hydrate remediation, multiple through-tubing well stimulations, External XT cap installation.
- TechnipFMC System Integration Test Facility, CWOR 5yr recertification May 2025
 - EDP & LRP flushing, function testing, pressure testing, disassembly and documentation.
- Deepwater Spar Production and Workover Platform March 2025
 - XT recovery, debris compromised hanger recovery, Tubing Head Spool recovery.

Hilcorp

Operations Engineer

Houston, TX

June 2019 – June 2023

- Planned and executed workovers, recompletions, and facility modifications, coordinating equipment installation and field execution to improve well performance and reduce operating costs.
- Implemented installation, startup, shutdown, and commissioning of surface facilities and wellhead compression systems for production uplift programs.
- Analyzed well performance and nodal models to identify intervention candidates and support technical planning for safe and efficient execution.
- Responded to process upsets and abnormal operations, applying SOPs and safe work practices to maintain facility integrity and production continuity.

Technical Skills

Offshore/onshore installation • Well intervention execution • High-pressure well systems • Landing string integration • Startup and commissioning • Hydraulic/mechanical systems • Equipment troubleshooting • JSAs and risk controls • MOC execution • API 6A / 17D • Installation planning • Design reviews • Technical documentation • RCA • Customer interface

Education

University of Alaska Fairbanks

Bachelor of Science in Petroleum Engineering. GPA 3.9, Magna Cum Laude

Fairbanks, AK

Aug 2015 – May 2019
